BOWIE LANDSCAPE SERVICE,
1513 W. TIOGA ST.,
PHILADELPHIA, PA..

IMPORTANT - PLEASE READ !

TERMS : Cash with order, please. Orders under \$ 2 respectfully declined.

ORDER EARLY : Again we urge you to order EARLY, thus avoiding the possibility of our being sold-out on certain of the rarer or newer varieties. Avoid the rush of late-season orders.

EXTRAS : We always include EXTRA plants in EARLY orders, received before APRIL 15th. We also include EXTRA plants, whenever you are thoughtful enough to include the names and addresses of some gardening friends. Let us know your preferences when expecting extras.

SHIPPING INSTRUCTIONS : Shipping charges are EXTRA on ALL orders. Please ADD 10 % EAST of the MISSISSIPPI; 15 % WEST of the MISSISSIPPI. Be sure to give COMPLETE ADDRESS with shipping instructions on each order. State whether you wish shipment by PARCEL POST or EXPRESS, and approximate date you wish plants to arrive. Otherwise shipment will be made by EXPRESS COLLECT at PROPER PLANTING TIME.

GUARANTEE : We guarantee COMPLETE SATISFACTION upon arrival of your order. All plants are packed with plenty of damp sphagnum moss around the roots, and wrapped in heavy wax-paper, and should arrive with dry tops, and moist roots. HOWEVER, should plants arrive in poor condition, please notify us, as well as the carrier, within 3 days, and we will see to it that proper adjustments are made. We have good reports from shipments to Texas and Calif.. We are NOT responsible for any failures due to growing methods, soil or other conditions over which we have no control. We want to keep your 'GOODWILL'.

WANT-LISTS : We shall be pleased to receive your complete list of plant requirements, other than those we herein list. We always carry many additional varieties in our Trial-Grounds and are constantly acquiring NEW varieties, hoping to find them worth listing.

SUPPLEMENTARY LISTS : From time to time we issue a Supplementary List of NEW plants that have proven their worth in our Trial-Grounds . These lists are sent to ALL regular customers and to anyone asking for them. So, if you are not a customer, but would like to be kept on our Mailing-List for these Supplementary Lists, please advise us by return mail.

COLLECTIONS : We gladly make-up plant collections from \$ 2 up, if interested.

GREETINGS !

I wish to thank you all for your orders, and for your letters of appreciation and helpful criticism received during the past year.

I wish to apologize to any of you who were late in receiving any of your plants or who still have some plants coming to you. I will see to it that your patience is rewarded, by including some extra plants with your order. All late-filled orders contain extra plants.

I hope to be able to fill each and every order promptly this year, but again must urge you to order early, as I have no control over supply and demand, weather conditions and other factors which often necessitate cancellation or holding-up of your order. I do not substitute unless you desire, in which case, please advise me of second choice.

I am most grateful for all the names and addresses of your gardening friends, which have greatly helped to reduce the cost of advertising, thereby enabling us to pass this saving on to you, by including extra plants with your order. You may be a party who received this list through a friend, by this method. Trust we can add many new names this year, for which we will continue to repay this kindness in extras.

I am sorry I cannot fulfill my desire, which was to have my 1941 Price-List printed and illustrated. Existing costs and business uncertainty won't permit it, so again a mimeographed list must suffice. Please keep it for accurate cultural requirements, colors, heights and blooming-dates, or if disinterested, kindly pass on to a gardening friend.

Hoping you find something of interest in this list and assuring you that your orders will have my usual personal attention, I remain,

very sincerely yours,

L. Graham Bowie

- * " bicolor - Lilac and pale blue form of the above, showy....20
- * sarmentosa - Yellow, 6", June, rare showy western native.....25

NOTE : BE SURE TO READ INSIDE COVER PAGES. IMPORTANT.

PLANNING THE ROCK GARDEN

The first essential of any Rock Garden, is that it looks natural. This does not mean that some particular spot in nature be copied. Instead, it means the preservation of the spirit of natural scenery in the assembly of materials used in its making. It must seem to be not an artificial creation, but an intricate part of its surroundings.

If possible, locate the Rock Garden where part of it will be in sun and part in shade. Then you can use all types of plants and provide them with conditions most conducive to successful growth.

Alpine plants should be planted in masses of one kind to obtain the best color effects. Larger plants and trees can be used singly as accents. We have designated all Alpines suitable for Rock Gardens by(*).

An alpine garden should be an artistic expression of rock formation, conveying the idea of a drift or outcropping of strata rock, not uniform or regular, but rather bold and so placed as to form a harmonious picture from all approaches.

PLANTING of ALPINES

Perfect drainage is most essential, for no Alpine will long survive a stagnant soil condition. Since most Alpines are deep-rooting, this fact should never be forgotten and when building a rockery wall or bank, ample depth should be provided. It is a deep, cool root run, under the stones, that is required for success. Next in importance is a thorough ramming of the soil around the roots to preclude the possibility of any air spaces. More planting failures are due to the infraction of this rule than from any other thing. Soil around the roots should be thoroughly soaked after planting. However, the soil must be loose on top, that rain may easily penetrate it, that the roots may breathe and that there be a mulch to keep the roots cool and moist.

We have noted in our list any special soil requirements. Where acid soil is required, use peat, humus or shagnum moss; where lime is required, use limestone chips. Many plants require only ordinary or neutral soil. Plant in sun or shade as designated; or where neither is mentioned, plant in sun or partial-shade.

A COLLECTION OF UNUSUAL ALPINE POST-CARDS

We offer an UNUSUAL COLLECTION of 175 Different Alpine Post-Cards, Beautifully reproduced in NATURAL COLORS from OIL PAINTINGS at \$ 7.50

 COST. PACKING & BOXING CHARGES ADDITIONAL if by FREIGHT or EXPRESS

LANDSCAPE ARCHITECTURE

LANDSCAPE ARCHITECTURE is a very important branch of our business. We shall be pleased to co-operate with you in planning your garden, regardless of size or planning problem. We can develop on paper your ideas or suggest a plan to you for any type planting you might have in mind, whether it be Rock Garden, Perennial or Shrub Border, Foundation or Complete Estate Planning.

Our competent Landscape Architect and Plantsman, Mr. L. Graham Bowie, (Penn State Graduate) has had many years practical experience in some of the leading Eastern nurseries. Should you wish a personal interview, Mr. Bowie is at your service for a nominal fee plus travelling expenses. He can undoubtedly save you much time, worry and expense, by the avoidance of costly mistakes in planning and planting-plans. He personally handles all planning and planting-problem correspondence. Write him in detail.

For small plans, no charge is made, providing we furnish plants, and if locally, the labor. Our men, being experienced, can set out plants much better and faster than inexperienced plantsmen, so that, although our hourly rate per man be higher, the total cost per job is less, since it is completed sooner, and is usually much more satisfactory. We gladly solicit local plantings and maintenance. Please get in touch with us before the usual Spring rush, should you desire our Landscape services.

We shall be pleased to furnish estimates on larger plans, as well as approximate labor and material costs. We shall also be pleased to furnish you with complete plant-lists and quotations on any size plants or plantings. Having many business contacts we can quote you the lowest prices on the best plant materials obtainable.

For larger and more intricate plantings we suggest a personal visit to the actual grounds, so as to get the 'lay and feel' of the land and its surroundings. Every planning and planting problem is different, in some respects, so requires a specific plan.

" IT'S NOT A HOME UNTIL IT'S PLANTED "

LANDSCAPE ARCHITECTURE

Introduction to the study of landscape architecture, its history, and its role in the design of the built environment. This course covers the principles of site analysis, planning, and design, as well as the practical application of these concepts in the field.

The course is divided into several sections, each focusing on a different aspect of the discipline. The first section deals with the history and evolution of landscape architecture, from its roots in the 18th century to the modernist movement of the 20th century. The second section explores the various methods and techniques used in landscape architecture, including site analysis, planning, and design. The third section focuses on the practical application of these concepts in the field, through a series of case studies and hands-on exercises.

Throughout the course, students will be encouraged to think critically and creatively about the design of the built environment. They will be expected to apply the concepts and techniques learned in the classroom to real-world situations, and to develop their own design ideas and proposals. The course will also provide students with the opportunity to work in teams, and to present their work to the class.

By the end of the course, students should have a solid understanding of the principles and practice of landscape architecture. They should be able to analyze a site, develop a plan, and design a landscape that meets the needs of the community and the environment. The course will also provide students with the skills and knowledge necessary to pursue a career in landscape architecture.

The course is designed to be both challenging and rewarding. It will require students to work hard and to think deeply about the design of the built environment. However, it will also provide students with the opportunity to learn from their peers and from their instructors, and to develop their own design ideas and proposals. The course will be a valuable experience for anyone interested in the design of the built environment.
